                                                                                                                                                                                                                     RESULT 8
```

Median was retinoblastoma, breast fumeur, colorectal carcinoma, sarcoma, presture tumour, bladder tumour, tumour of the reticuloendothelial tissues, Wilm's tumour, astrocytoma, glichlastoma, neuroblastoma, ovarian carcinoma, osteosarcoma or renal cancer. The present sequence encodes the retinoblastoma tumour suppressor protein pile-RR, which is

given in the exemplification of the present invention. Sequence 295 BP; 975 A; 618 C; 593 G; 809 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 profess (RISP) of the invention. The proteins can be used for inhibiting cellular profileration when condministered with a p^{\rm rat} protein. The PISPs can be used for treating diseases characterised by abnormal cellular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              diteration, particularly cancers. The RTSPs have a broader spectrum of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    81 ValSerValAspGlyValLeuClyClyTyrtleClntysLysCysCuLeuTrpGly 100

```
tetracycline responsive expression vector (IREV), which contains a sequence enroding a fusion protein comprising a transcriptional transactively on domain (TTD) generalizely attached to a tetracy line repressor protein (TRP), the lirst sequence operatively positioned downstream of a promoter. The vector also contains a cloning site operatively positioned downstream of a basal promoter comprising a tetracycline operator, the TREVS can be used to produce stable cell lines in which gence expression is rightly regulated by tetracycline. They can be used for the production of proteins such as tumour suppression profession is the production of proteins such as tumour suppression profession to the production of proteins such as tumour suppression.
The present sequence appears in the specification, which describes
                                                                                                                                                                                                                                                                                       Minimal promoter; tetracycline responsive expression vector; TREV;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tightly controlled expression of genes, such as tumour suppressor genes for treating cancers

treat conditions related to (premature) ageing, e.g. macular degeneration
                                                                                                                                                                                                                                                                              The invention concerns methods and readents for extending the life span, e.g. the number of mitotic divisions, of a cell. The method relies on activation of a telomerase activity and inhibition of one or hoth of a retinoblastoma (Rb)/INR4 pathway or a p5% puthway. Phospbarylation of Rb by cyclin-dependent kinases, coke and coke, releases the cells into the by cyclin-dependent kinases, coke and coke, releases the cells into the suppressor pleinka, inhibits kinase activity and results in another suppressor pleinka, inhibits kinase activity and results in another arrest. Rb inactivators can selectively and reversiby inactivate an Bb/INK4 pathway, especially an Br/pleinK4 pathway. The enceptotels MDM2 is cellular inhibitor of RB/EEF function and the p5% tumout suppressor and can also be used in the methods, other molecules which can be used include cdk4 or cdk6 mutants. In particular, a cdk4 mutant is one which satisfiers from at one or more constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and arteriosclerosis. The cells can also be used to replace tumour cell. Times in vitro and for studies on licellemical and physiological aspects of growth and differentiation. Long lived (immortal) cells could also be of use in the production of normal or genetically enquered.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Additional constructs include a papilloma virus E7 protein, or other viral ecopy of the will harpasses Bb and/or ff. Antisense constructs of the Rb and plbinK4a genes may also be used. The methods are useful for increasing the profiferative capacity of cells, the cells are subsequently of use in pharmaceutical and cosmette proparations used to
                                                                          New method for increasing the proliferative capacity of cell lines comprises administering agents reversibly activating telemerase activity and recepibly inactivating ELTARA usifor per pathways useful
                                                                                                                                                                                                                            Claim 5; Page 121-123; 123pp; English.

Screening for anti neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.

Claim 1: SEQ ID 1210; 44pp: English.

The present invention describes a method (MI) for screening for an anti-neoplastic agent. The method invelves expessing cells to a chemical activity determining a change in expression of at least one gave (I) of a signature gave set, where (I) expression of at least one gave (I) of a signature gave set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least of anti-neoplastic activity. (B) has cytostatic cypression is indicative and can be used for producting a product which at an anti-neoplastic activity and can be used for product which is the data collected with respect to the anti-neoplastic agent as a result of ML, and the data is sufficient, to convey the chemical results of structure and/or properties of the agent. MI can be used in the treatment of cancer such as solon, breast, stomach, lung, thyroid, orsophatical ovarian, kidney, prostate or parereatic cancer, orsophatical cancer, infiltrating ductal cancer, infiltrating ductal cancer, infiltrating ductal cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous call carcinoma, neuroendocrine

* 888888	This sequential (cellular can be us prolifera activity)	This sequence encodes a modified retinoblastoma tumour suppressor protein (RISP) of the invention. The proteins can be used for inhibiting cellular proliteration, when coadministered with a p54 protein. The RISPs can be used for treating diseases characterised by abnormal cellular proliteration, particularly cancers. The RISPs have a broader spectrum of activity than wild type RISPs.

The proteins can be used for inhibiting recibilar proliferation, when coadministered with a p53 protein. The BTSPs cut be used for treating diseases characterised by abnormal cellular polifieration, particularly cannors. The BTSPs have a breader spectrum of

The first sequence operatively positioned downstroam of a promoter. The vector also contains a cloning site operatively positioned downstroam of a basel promoter comprising a retargetine operator. The TRIVs can be used to produce stable cell lines in which game expression is tightly regulated by tetracycline.

Theat conditions related to (premature) agents, e.g. machiat determination and attentosclerosis. The cells can also be used to replace tumour cell these in vitro and for studies on biochemical and physicological aspects of growth and differentiation. Long lived (immortal) cells could also be of use in the production of normal or genetically engineered.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         e.g. the number of mitotic divisions, of a cell. The method relies on antivarion of a telemerase activity and inhibition of one or both of a retinoblastom of Rb Junka pathway or a p53 pathway. Phosphorylation of Rb by cyclin dependent kinases, c&q and cd&b, releases the cells into the division cycle. Binding of INK4 tamily members, e.g. the tumour suppressor pleTNR4a, inhibits kinase activity and results in quowth division cycle binding of Environmental and results in quowth the test. While interivators can selectively and reversibly inactivate an ELCINY is a cellular inhibitor of Rb/ICET function and the p53 tumour suppressor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the invention concerns methods and reagents for extending the lite span,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Additional constructs include a papilloma virus P2 protein, or other viral oncoprotein which bypasses Rb and/or p53. Antisense constructs of the Rb and plenukka genes may also be used. The methods are useful for increasing the proliferative capacity of cells. The rells are is beequeptly of use in pharmaceutical and cosmettic preparations used to theat conditions related to (premature) against e.g. maralar degeneration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and can also be used in the methods. Other molecules which can be used include cdk4 or cdk6 mutants. In particular, a cdk4 mutant is one which differs from at one or more if residues K22, R24, H95 and/or P97.
                                                                                                                                                                                                                                                                                                                                                                                        o mprises administering agents reversibly activating telemerace activity and reversibly hazefung Ph/INK4 and/or p3 pathways useful
                                                                                                                                                                                                                                                                                                                                                                   Now method for increasing the proliferative capacity of cell lines

fact: tate the development of screening assays to evaluate the potential efficacy of drugs in the treatment of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the present sequence encodes a human androgen receptor coactivator destinated 8b. Androgen receptor exactivator proteins from the present invention can be used in screening assays to identify candidate pharmaceutical molecules for the ability to promote or inhibit the interaction of androgen receptors and androgen responsive elements to modelate analogues activity. The identification and characterisation of androgen responsive elements to addition receptor co-activity. The identification and characterisation of androgen receptor co-activity and above of the invention will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Move' androgen receptor associated proteins used to detect androgenic or antiandrogenic activity in screening assays for candidate pharmaceutical molecules which promote or inhibit the activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human andrigon receptor positivator, APA54, APA55, APA24, dofertion, No. ention, No. androgenic; antiandrogenic; identification; prostate cancer; ss.

The present invention describes a method (M1) for screening for an animal and incoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (1) of a signature gene set, where (1) comprises a sequence (s) selected from 8447 sequences (given in ABL51664 p. 1-ART9110). A method for detecting the presence, in a tumour sample, of a protein the absence of which is associated with a necplasm, comprises producing an antibody to the protein and then contexting the antibody with the tumour sample. Immune complexes indicate the presence of the protein in the sample. The method may be used in the detection and treatment of a defective human gene related to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GGAATCTGTATCTTTATTG7AG7AG1TGACCTAGCTGATATCTCTCACTTTTACTGAG 363

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This is the nucleic acid sequence of a cDNA of the normal human retineblasticma gene Rb. Absence or mutation of the Rb gene (see also AAX04502) predisposes an individual to retinoblasticma. To isolate Rb cDNA, the human DNA probe pH3 8. isolated from a human chromosome 13 lambda phage library, was used in a chromosome waik to isolate and map 30 kb of genemic PNA surrounding the HP38 sequence. Pragment pPNA (ALCC 97500) was obtained, and was used as a probe to screen a cDNA library that had been constructed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gene can also be used to synthusize Nb polypeptide (see AAN01542) f
use in the treatment of individuals determined to have a defective
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            trom an adenovirus 12-transformed human embryonic retinal cell
line. This provided clone p4 7k ARC (9788), which in Northern
blots cross-reacted with a 4.7 kb transcript in transformed
retinal cells which was not present in 4 retinoblastoma and one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        99.0%; Score 3520.2; DB 20; Length 4597; 99.8%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               osteosarroma cell samples. Rb nucleic acids comprising the Rb gene, DNN or a fragment of the fore, act as one of the the fore or 26 introns, can be used in a chalmed method for detecting a deletion or point mutation in the Rb gene of a human patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3; Indels

Diagnosis of retinoblastoma · using genetic material corresp. to a normal human retinoblastoma gene or a unique sub-region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   neoplasm. It is used to produce an antibody to the protein, contacting this with the tumour sample and detecting immune complexes as indication of the presence in the tumour sample of the protein. Whole sequence or a unique sub testion can be assed. The method identifies patients lacking the defective retinoblastoms (Rb) allele and thus are not at risk of
                                                                                  This gene encodes a protein, the absence of which is associated with a

Also included for is an anticaneor agent comprising mycolartone and antisense inhibitors of retinoblastoma (Rb) protein expression. The anticancer agent is used for the treatment of cancers such as breast, bladder, skin, stomach, liver, colos and oral cartty, lymphoma and loukacmia. The anticancer agent induces apoptotic death of cancer cells and the Rb inhibitor increases the apoptosis inducing activity of mycolactome even in Rb positive cancer cells. The agent is specific to cancers in which Rb proteins are optionally expressed and mycolactome shows very strong anticancer effect in vitro as well as in vivo.

The proteins can be used for inhibiting cellular proliferation, when coadministered with a p53 protein. The RISTs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The PISPs have a broader spectrum of

protein (RTSP) of the invention. The proteins can be used for inhibiting celliar proliferation, when coadministered with a p53 protein. The RISPs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The RISPs have a broader spectrum of activity than wild type RISPs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HILLIHILIHIHIHIHIHIH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3542 ITTAAATGAGGATTATTGATAGT 3554
